Importance: High

Attached for you is the Daily AQAD Report. THIS IS NOT A REPORT DEALING WITH ANY OF THE DATA THAT EPA IS COLLECTING!

This report assesses the air quality data from the permanent south Louisiana fixed monitoring stations that we have. This information should help to answer questions about odors that folks might smell (like last night in Baton Rouge) but that may not be of levels high enough for detection or action.

In the narrative portion of the daily report, we will provide the summary language that you need to respond to inquiries. The table contains data from the last 24 hour period and also provides historical yearly averages for comparison purposes.

I have promised Rodney that this report will be submitted to him each day between 10am and Noon.

I have also attached the Sampling Guidance that describes how we are assessing the data and what the constituents are that we would expect to see.

Please let me know if there is something else that you need or want to see here in the report.

Remember that data collected and/or analyzed by EPA will be provided according to the Data Plan (which my staff has not yet seen).

Michael D. Vince, MPA
